Calliope Hummingbird

Small even for a hummingbird, its hunched posture makes it look even smaller. It has a short tail and short wings that barely extend past the end of the tail. The bill is thin and short for a hummingbird. Calliope Hummingbirds breed in mountain meadows, aspen thickets near streams, and open forests that are regenerating from a forest fire or logging. The standout feature of a Calliope Hummingbird is the magenta rays on the male's throat. Both males and females are greenish above, but males wear a greenish vest below while females and immatures have a peachy wash across their underparts.
